Barroan-shidama H. Anthropoldean lineages ', mentago event horozone gene in three Anthropoldean lineages ', mentago event horozone gene in the Shemited (MPS 1201) To the mentago event in great potential to shemited (MPS 1201) To the mentago event in the control its major - tols in standisting body growth is to stimulate the lines and other tissease to secrete 167: It stimulates both the differentiation and polification of myoblasts. It also stimulates mainto said supeks and protein graythess in meals and other assets.

    -!- TISSUE SPECIFICITY: Expressed in the placenta.
    -!- SIMILARITY: Belongs to the sometotropin/prolactin family.

Ree. 51 Suppl. 12-6(1999).
FINCTION: Playe an important role in growth control. Its major role in stimulating body growth is to etimulate the liver and other timume to secrete 18-1. It etimulates both the differentiation and protlibration of spoblames. It also etimulates antino scid uptake and protein symbolates. It also etimulates amino scid uptake and protein symbolates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBUNIT: Monomer, dimer, trimer, tetramer and pentamer,
